; The following get translated by MDL into a bunch of MACROs and LITERALS
; in the REQUIRE file LIB$DBGMSG.REQ and in the MACRO library LIB$D.MLB
; These macros (which are actually field definitions in macro form) and
; literal constants are still used in a number of places in DEBUG.
; Eventually it might be nice to get all of these into the common require
; file DBGLIB.REQ and leave only error messages in DBGMSG.MDL.
```

\$STRUCT DBG

; DEBUG definitions that describe the context of the user's run frame.

```
